MAURO PIETRO NEGRI & CESARE CORSELLI (2016) Bathyal Mollusca from the cold-water coral biotope of Santa Maria di Leuca (Apulian margin, southern Italy). *Zootaxa*, 4186: 001–097.

The acknowledgments on page 85 should read as follow:

The present work was realized as part of CoralFISH Project, funded by the European Commission under the Seventh Framework Programme (FP7), grant agreement no. 213144. The studied samples were recovered during MAGIC-CoralFISH Cruise of CoNISMa r/v Universitatis in northern Ionian Sea (April 7th–24th, 2010), Principal Investigators Gianfranco D’Onghia (CoNISMa LRU, University of Bari) and Cesare Corselli (CoNISMa LRU, University of Milano-Bicocca), Chief Scientists Alessandra Savini (CoNISMa LRU, Milano-Bicocca University) and Gianfranco D’Onghia; in this respect, all participants and vessel crew are acknowledged. Thanks are due to Agostina Vertino (University of Milano-Bicocca) for collaboration in treating samples, and to Daniel L. Geiger (Santa Barbara Museum of Natural History) for help in identifying *Anatoma aspera*. We are grateful to Rafael La Perna (University of Bari), Emilio Rolán (University of Santiago de Compostela) and Alexander Nützel (Bayerische Staatssammlung München) for their useful hints and suggestions in the formal review of the paper.
